- Working on Flash driver (NOR/NAND) and implement mobile phone's file system;
- Bootloader for TI OMAP and Qualcomm QSC/MSM platforms;
- Contact interface with other global teams;

## Notable Projects

### MineMessageVibrator

An Android App that helps users get the vibration notice and reminders for SMS/Gmail/Missed Calls. Surprisingly it even helps deaf people a lot!

Link: <https://code.google.com/p/minemessagevibrator/>

### MinePsfPlayer

An Android App that plays PlayStation music in .psf format.

Link: <https://github.com/mine260309/android-sexy-psf-player>

### Personal Blog on Raspberry Pi with nginx and load balance

In spare time I write technical articles on my blog, which is an achievement for myself; The blog is set up on RaspberryPi at home (so sometime may be unstable...)

### Connected Home

All the digital devices are connected in my home with carefully design and deploy by DLNA and Samba technology. A certain hardware is done manually for limited resource.
